

The Basel III framework introduced Leverage Ratio as a non-risk based backstop limit intended to supplement the risk-based capital requirements. It aims to constrain the build-up of excess leverage in the banking sector, introducing additional safeguards against model risk and measurement errors.

Leverage Ratio is calculated as Tier 1 Capital divided by Exposure Measure which comprises on- and off-balance sheet exposures. Along with disclosure of this ratio in the Group Financial Report, the Group is required under MAS Notice 637 to disclose the tables below using prescribed templates.

Table 1 shows the reconciliation between the Group's published balance sheet assets and the Exposure Measure, while **Table 2** sets out the components of Exposure Measure.
